Smart card Solutions:

Naxtor Technologies supply chain division develops smart card solutions for a variety of vertical markets:.

These include health, mobile telephony, across the world today, smart cards are used in:

- ◆ banking (e.g. debit/credit transactions);
- ◆ retail (e.g. electronic cash, loyalty schemes);
- ◆ telecommunications (e.g. mobile phone SIM cards);
- ◆ security (e.g. access control);
- ◆ health (e.g. patient records, pharmaceuticals);
- ◆ transport (e.g. road tolls, parking fees, bus fees); and

Software engineers specialized in smart card applications don't come by easily. Our smart card software engineers are ready to take on your project requirements . This can be as simple as converting legacy systems which use barcode or magstripe technology across to smart cards, and can be as extensive as developing highly specialised applications to meet complex business requirements.

RFID & Barcode Solutions

Naxtor Technologies supply chain division develops RFID & Barcodes solutions for a variety of vertical markets that includes Manufacturing companies, Warehouses, retail, Security, health and transport.

We have worked with various blue chip clients across different industries.

Our success has come from providing our clients top support as well as extra ordinary service in the face of ever changing technology and systems.

We started as a young small company and grew exponentially to a mid-size company in a little span of time. It's all possible due to the synergistic partnerships with our clients and vendors.
